

Hot Foil Colours

Metallic Foils

Metallic foils have a shiny finish, they change in gradient colour under changing light conditions

Please note that this is a guide only, and does not replicate the finished colour. Your screen will translate the colours differently to reality.

We recommend requesting foil samples if you wish to see what the colours look like, foils also vary depending on what colour box you choose.

Hot Foil Colours

Matt Foils

Matt foils give a solid fill effect, they do have a slight shine but the colours stay the same in all conditions

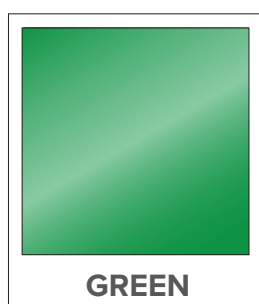

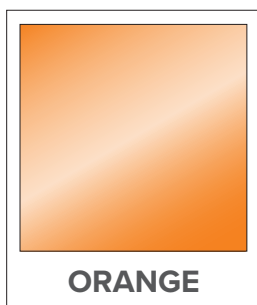

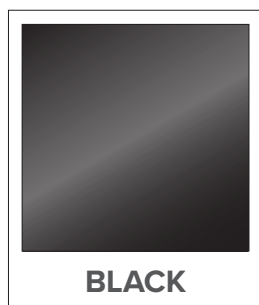

Please note that this is a guide only, and does not replicate the finished colour. Your screen will translate the colours differently to reality.

We recommend requesting foil samples if you wish to see what the colours look like, foils also vary depending on what colour box you choose.

Gloss Foils

Gloss foils give a glossy print effect, they have a shine but maintain their colour

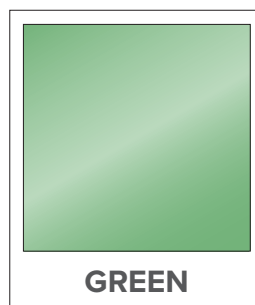

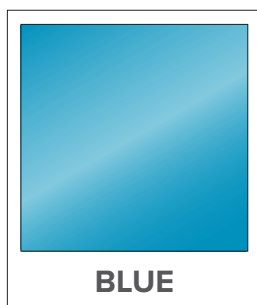

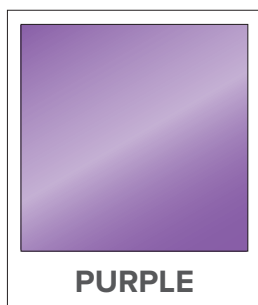

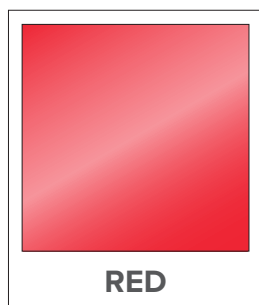

Please note that this is a guide only, and does not replicate the finished colour. Your screen will translate the colours differently to reality.

We recommend requesting foil samples if you wish to see what the colours look like, foils also vary depending on what colour box you choose.

Hot Foil Colours

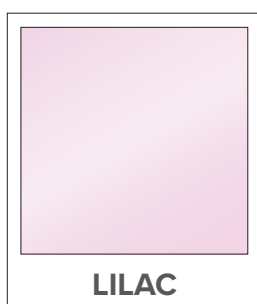

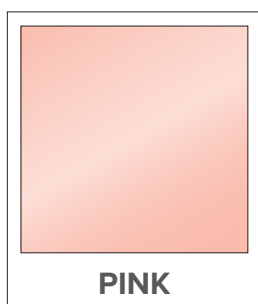

Satin Foils

Satin foils give a shiny print effect with a subtle metallic quality

Lustre Foils

Lustre foils give a soft sheer print effect

Please note that this is a guide only, and does not replicate the finished colour. Your screen will translate the colours differently to reality.

We recommend requesting foil samples if you wish to see what the colours look like, foils also vary depending on what colour box you choose.
